

## Measurement – End of the Month

**Grade 1  
OCTOBER**

What object did our helper choose for us to measure today? Let's put the first tile (or cube) down to match up with one end of our \_\_\_\_\_. If we line up these tiles (or cubes) along our \_\_\_\_\_, how many do you guess we will need in all?

Let's keep track of all our guesses. What length received the most guesses?

How many of us think the length will be \_\_\_\_?

Let's line up more tiles (or cubes) to see how many we need in all. Is the amount left over less than half a tile (or cube)? Only if it's halfway or more, can we add another unit.

How did your guess *check* out? Were some of our guesses too long? How many of us made a guess that was too long?

Were some of our guesses too short? How many? How many were just right?

What shall we measure next?
