

Clock – Day of School 30

**Grade 1
October or
Month 2**

Let's count the minutes we have colored in by ones. Now let's count them by fives, clapping on the last five.

How many groups of five minutes do we see? How many groups of five tally marks do we see?

If we have colored in 30 minutes and are halfway around, how many minutes are there in a whole hour?

If we go back one minute, where will the minute hand be pointing?

If we go ahead two minutes, where will the minute hand be pointing?

Who thinks they can catch the classroom clock when its long minute hand is pointing down to the 30-minute mark during the day today? Let's try.
