

Measurement – Middle of the Month

**Grade 1
OCTOBER
or Month 2**

What are the names of the three items we see on the rug today?

Let's look at how long each one is. Let's try to compare the lengths. Which object do you think has the shortest length? Which one do you think is the longest?

If we line them all up *in order* by their lengths, which item do you think will be "in between" the shortest and longest items?

Let's check our guess. What can we do to find out the order for sure?

If we take the longest item away and grab a different object to put out, do you think the shortest item will still be the shortest?

How can we find the longest item in the box? How can we find the shortest item?
