

## **Clip Collection – Day of School 45**

**Grade K  
NOVEMBER  
or Month 3**

---

How many clips do we have so far? When we add today's clip how many will we have?

---

I've added today's clip. How many chains of ten do you see? How many extra ones do you see?

---

How many in all? Let's check by counting by tens and clapping on the last chain of ten. Then we'll count on the extra ones.

---

How many more do we need to finish another chain of ten?

---

If we take a clip off how many will we have? If we take a chain of ten away how many will we have?

---

Could we find 45 *or more* clocks in our room? 45 doors? 45 chairs? 45 crayons? 45 books? How could we count and keep track as we go? (Put them in piles of five or ten; put a piece of paper after each group of ten, keep a tally as we count each item, and so on.)
