

Coin Counter – Beginning of the Month

**Grade 1
NOVEMBER
or Month 3**

How will we show 8 cents using the nickel? (A nickel and 3 pennies)

How can we be sure this is 8 cents? (Count 5 for the nickel, then 6, 7, 8)

So, if we can use a nickel for 5 cents and pennies for 1's to show 6 is $5+1$, 7 is $5+2$, 8 is $5+3$, what will 9 cents look like?

How many more pennies do we need to get our next nickel?

If we are only using nickels and pennies, what coins do you think will be in our Coin Counter on Day 11? Day 15?
