

## **Calendar – End of the Month**

**Grade 1  
NOVEMBER  
or Month 3**

---

What patterns have you noticed on the Calendar this month? What have you learned from the Calendar this month?

---

How are the green triangles all alike? (Same color, three sides, three corners, numbers) How are they different? (Some have 3 sides that match and some don't. Some have a square corner and some don't. Some have a point at the top like a tree and some don't.) How are the triangles different from the squares? (Color, different number of sides and corners)

---

If we want to act out the aab pattern using motions, what shall we do on the triangle pieces and what shall we do for each square piece?

---

Does anyone have a different idea for how we can act out the aab pattern?

---

Let's say the numbers on the green triangles. (1, 2, 5, 6, 9, 10, 13, 14, and so on.) What did you notice about these numbers?

---

How many pieces do you see on the Calendar? Can you keep count as I take each piece off the Calendar? We'll be ready for tomorrow, the first day in December.

---
