

Question Starter Card - Day 47 - Adapt to any day where regrouping is a possibility.

Daily Depositor – Day of School 47

**Grade 3
NOVEMBER
or Month 3**

Let's look at what we are adding today. How would you like to go about getting the total or the sum? (Answers will vary.)

Did anyone else also do it this way? What strategy is this?

Would someone who got the sum a different way be willing to share how you got the total? What strategy is this?

Now that we finally have a sum of more than a thousand dollars, can you estimate how many more days we need to come to school to get our next thousand? Will it take another 48 days? Why not?

Who can tell me how to write today's amount in expanded notation?

How could we round off the total for Day 46 to the nearest ten? (980) nearest hundred? (10 hundreds or 1,000)

How will Day 47's total, \$1,028.00, round off to the nearest hundred? Is this the same as the nearest thousand? Why? (Ten hundred is the nearest hundred and that is equal to a thousand.)
