

Calendar – Middle of the Month

**Grade K
NOVEMBER
or Month 3**

What do you notice about our Calendar so far? (There's a purple red pattern and a circle rectangle pattern. Some rectangles are squares. Some are standing up and some are lying down. Some shapes go down sideways.) We have had three birthdays and there is one more birthday on the calendar.

Can you say the numbers on the red pieces in order? What are we doing? (Counting every other one, counting by twos; skip counting)

Can you say the numbers on the purple circles? What will the number be on our next purple circle?

What do you notice about all the red shapes? (They have four sides and four square corners. They are rectangles. They go by 2's; and so on.)

What makes a square belong to the rectangle family? (Four square corners)
What makes it a special rectangle? How is it different from all the other rectangles? (Four sides are the same.)

Can everyone say all the days of the week starting with Sunday? What is today's date? What shape will appear on our next birthday? How do you know?
